

THE SECRETS OF THE EARTH

Lights to reveal nature

Now that you know my story, I invite you to discover, through this activity, the life that lives within me.

Through light, drawing, and color, you will be able to recognize species of my local flora and fauna, learn how they live, and understand the importance of caring for the biodiversity that surrounds me.

1. Sit around the tables and observe how the light reveals the hidden images of the flora and fauna of the Sierra de Estepa.
2. Look carefully at the shapes, silhouettes, and details of each species that appears on the illuminated surface.
3. Identify and name the different natural elements with the help of the educator, relating them to their environment in the mountains.
4. Choose one of the species you have discovered and draw it.
5. Color your drawing and place it on the collective mural to create, together, a large map of the biodiversity of the Sierra de Estepa.

PANEL

The great biodiversity map

Each stroke, each shape, and each color will help you look at nature in a different way: observing, feeling, and learning together with others.
